Honeycomb coverage audit on the rendered patient leg: same safety gates, four planners (plan only; printing disabled)
A previous planner (one lattice, whole cells)
8 cells; safe-area coverage 42.4%; wound 22.9%
status PARTIAL; violations 0; stop NO_SAFE_SUPPORTED_REGION
B whole-cell search
51 cells; safe-area coverage 72.6%; wound 39.1%
status PARTIAL; violations 0; stop NO_SAFE_SUPPORTED_REGION
C adaptive whole-cell (smaller cells at edge)
51 cells; safe-area coverage 72.6%; wound 39.1%
status PARTIAL; violations 0; stop NO_SAFE_SUPPORTED_REGION
D boundary cells clipped to safe region [SELECTED]
29 cells; safe-area coverage 94.2%; wound 50.8%
status COMPLETE; violations 0; stop NO_SAFE_SUPPORTED_REGION
across wound (mDU)
along wound (mDU)
outside the wound
excluded boundary margin
ineligible: < 1 layer below lower uncertainty envelope
eligible but uncovered
covered by accepted honeycomb
wound boundary
safe (eligible) region boundary
accepted cell outline
E Previous planner: 42 of 50 cells rejected
(25 of them held 16.8 mDU² of safe area)
complete hexagon outside wound
boundary margin
missing support
uncertainty gate
below one layer
cell touches this reason
first reason (order shown)
rejected cells of the previous lattice
F Planner search: 480 lattices
(5 sizes x 6 rotations x 16 offsets)
planned safe-area coverage (%)
hexagon side (mDU)
whole cells (best rotation/offset)
adaptive whole cells (base side)
whole + clipped boundary cells
whole cells below printable size (not allowed)
previous planner (one fixed lattice)
coverage gate
smallest printable side
G Wound area still >= 1 layer below target
area (mDU²)
after stage (0 = before printing)
previous planner (one lattice, whole cells)
whole-cell search
adaptive whole-cell (smaller cells at edge)
boundary cells clipped to safe region
H Safe area still with >= 1 layer of room
(below the lower uncertainty envelope)
area (mDU²)
after stage (0 = before printing)
previous planner (one lattice, whole cells)
whole-cell search
adaptive whole-cell (smaller cells at edge)
boundary cells clipped to safe region
